Sprint 3 Review

Expectations

1. A vertically integrated prototype/system deployed to AWS that demonstrates at least three (3) use cases. Login, no matter how many use cases you have for this step, counts as one use case.

Comments:

*   Implemented user login with encrypted passwords. Also maintains sessions
*   Movie search and Movie details page implemented with the new UI.
*   Provides ability to rate a movie

2. Demonstration of these use cases at the sprint review. This should be done from an arbitrary laptop using a browser. You cannot fire up an IDE to run the app.

Comments:

  The team is using smart commits.

Comments:

3. SonarQube integrated into the Jenkinsfile and the team can unambiguously identify the report (or have it delivered). Many of you are using the same name (e.g. spoiled tomatillos). A hint is to affix your team's name to the job (and possibly the branch name).

Comments:

Integrated

4. Produce a document assessing the project's needs against the team's experiences and skills. Each team member must contribute to the document and the team as a whole must work together to integrate all the assessments. For each gap identified, there should be a plan in place to address the concern. These should be noted in Jira. The document should be written in a memo style using either the template supplied or one of your choosing.

Comments:

Looks good

5. Stretches

- Gates for code coverage and branch coverage assures a good quality code.
- Quality gate for pylint enforced.
- Added reporting tools for both test coverage and linting.

Grade: A-
